

## **Mobile Heating Boiler Hire supplied for drying floor screed using installed Under-floor Heating for a Project in Wolverhampton.**

Watkins Hire installed a mobile oil fired [LPHW heating boiler](#) to dry newly laid concrete screed flooring at the new build industrial building in Wolverhampton.

HeatGEN 100kw mobile boiler houses and 1000-litre FuelPAK bundled fuel tank (fitted with internet based fuel monitoring telemetry)

Under-floor heating installation prior to floor screed being laid

**“The Problem”** - Due to delays in fixed heating boiler plant being delivered, installed and commissioned, the main contractor wanted to keep the project on target for the completion date. They had just installed a new screed flooring that required curing and drying to the screed manufacturers recommendations, Watkins Hire were contacted by the main contractor to provide a controlled solution.

**“The Solution”** - They looked at many solutions, but none offered the degree of control required to dry the new floor out correctly and maintain the supplier guarantee's, [Watkins Hire](#) are currently supplying [temporary hotwater boiler rental equipment](#) to several projects from large manufacturing plants, schools, office's and many retail and industrial buildings all under construction where the under-floor Heating systems are being used with our hotwater hire boilers for controlled floor screed curing and drying, Watkins were able to demonstrate how the process needed to be well controlled with temperature steps made ensuring that the curing & drying process is not forced, as curing & drying out a newly laid floor too quickly could result in damage to the floor.

**Sales Director Roderick Williams said** “Our hotwater mobile boiler hire equipment has been proven and used by all the leading construction companies over the last two decades to provide the construction industry and floor / screed laying contractors with the correct and controlled floor curing & drying systems. With the largest range of [portable boilers](#) available for hire in Europe we typically are curing & drying thirty floors a week, we are the supplier of choice, and from small industrial buildings to car manufacturing plants we have dried them all without any problems. We offer the most modern and efficient equipment with constant investment in new technology, for example we have installed remote telemetry fuel management on our complete fleet of [FuelPAK bundled fuel tanks](#) to provide our clients with true fuel management. We also pride our self on safety and are CHAS / PASA and Safecontractor accredited and are prequalified with **Constructionline** to simplify tendering qualification and specification”

The boiler selected for this project was the new [HeatGEN heating boiler hire](#) model [MBR100](#) as it had the following features that provided speed of installation and allowed the construction company to move the hire boiler from one building to another building on the industrial site and connection to existing systems is made simple by using quick fit flexible hoses, it also provided without modification time clock control and building protection during frosts and colder weather.

The heating boiler hire unit came with a time clock to enable accurate timings for each temperature raise required to cure the floor without damage. Another feature was the frost stat which provided the same building protection as a fixed installation.

Equipment supplied by Watkins Hire included a [HeatGEN MBR 100kW mobile oil fired heating boiler](#) and quick fit flexible heating pipework, a [FuelPAK 1000-litre bundled fuel tank](#), the fuel tank was UN & ADR compliant which allowed it to be legally delivered to site full of fuel, which allowed same day delivery with our own hiab and commissioning.

Watkins hire provided piece of mind and support to the construction site manager ensuring fuel supplies were constantly monitored and maintained, by providing a web based fuel monitoring telemetry system which monitored remotely fuel consumption and automatically re-ordered when refuelling was required, this [fuel management](#) feature is unique to Watkins Boiler Hire and is offered completely free of charge.

**The Construction site manager said** “We have worked with other companies in the past for floor drying and curing with varying results; we were very surprised by the standard of the equipment supplied and the level of service supplied by Watkins Boiler Hire. We are very pleased with the curing and drying project and our procurement Director has awarded Watkins Hire preferred supplier status after my personal recommendation; they handled the whole project and even looked after the fuel supplies with a clever web based fuel monitoring system, their driver was ADR trained which allowed the fuel tank to come full which enabled same day installation and commissioning, we have decided to keep the boiler to utilise the under-floor heating system to dryout and warm up the fabric of the building, by using the domestic hotwater circuits from the mobile boiler we have pre-commissioned the buildings welfare facilities. We were also surprised by the range of [site heaters](#) that Watkins could offer, and have just hired a new [170kw site heater](#) that has an integral ADR bonded fuel tank which seems to be setting new standards in environmental protection for construction site heating.”

Watkins Hire range of [portable heating boilers](#) extends from 70kW to 3000kW with Oil and Natural Gas Burners and we are the Industry's leader in providing hotwater and heating boilers, when and where it's needed.

Today WatkinsHIRE understand that it takes more than innovative, high performance products, superior technical service to help our customers compete and win in today's global marketplace.

It takes a total commitment to understanding the construction industries needs; at WatkinsHIRE we pride ourselves on our ability to provide the right specialist temporary temperature rental solutions every time.

As Europe's largest independent specialist mobile temperature rental company, WatkinsHIRE hires [Steam Boilers](#), HeatGEN [Heating Boilers](#), DHW Boilers, KwikHEAT [Warm Air Heaters](#), KwikCOOL [Portable Air Conditioning](#), KwikDRY [Dehumidifiers](#), KwikCHILL [Chillers](#) and [Site Welfare units](#) to every conceivable industry sector.

A quick free call to WatkinsHIRE 0500 526696 and you will be in touch with a product specialist who will discuss and understand your requirements, arrange site visits where necessary and provide you with a competitive quotation.

- Watkins Heating Boiler hire prices are truly competitive
- Watkins Heating Boiler hire offer same day delivery when required
- Watkins Heating Boiler hire guarantee to beat any like for like quotation.
- Watkins Heating Boiler hire originated the concept of boiler hire in 1930
- Watkins Boiler hire don't operate a call centres, just real sales engineers
- Watkins Boiler hire provide full installation service when required
- Watkins Heating Boiler hire offer true 24/7 breakdown service
- [Watkins Heating Boiler hire have depots nationwide you can actually ring.](#)
- Watkins Heating boiler hire have largest range of mobile, trailerised and containerised heating boilers in Europe

**Call us on 0500 526696 and we'll help you choose the heating boiler that suits your application.**

For planned or emergency under floor drying or heating boiler hire WatkinsHIRE delivers to anywhere in the UK and Europe via our nationwide depots.

Nationwide Depots

London - West Midlands - Gloucestershire - Yorkshire - Manchester - Grangemouth - Hampshire
